

LogPoint solution brief

LogPoint solution brief

LogPoint is a security information and event management (SIEM) solution that collects, stores and analyzes log data from your entire IT infrastructure to detect suspicious activities and respond to threats. LogPoint empowers security analysts to succeed and gives a complete view of the threat landscape, including automated compliance management, application security monitoring and threat hunting with advanced machine learning. Arm your organization with LogPoint to improve effectiveness and reduce risks.

Some of the ways LogPoint helps organizations

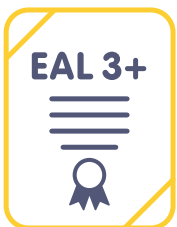

- Secures the entire infrastructure with support for thousands of data sources
- Compliance management of GDPR, HIPAA and many more with automated data collection and reporting templates
- Detects and prioritizes the riskiest users and entities with native UEBA with machine learning
- Saves time on incident detection and investigation with automated incident response tools
- Understands attackers' behavior and mitigates risks and threats with the MITRE ATT&CK framework
- Enriches log data with critical information about the latest threats and attack tactics
- Secures cloud data with out-of-the-box support for popular cloud platforms, including Office 365, Salesforce and Azure

What makes LogPoint different?

Improved efficiency with a single taxonomy

LogPoint normalizes log data into a single common language, making it easy to correlate data across applications and identify patterns. Normalizing the data upon ingestion, rather than upon search, significantly speeds up search and correlation, reducing the time to detect.

Secure solution with EAL 3+ certification

LogPoint is EAL3+ certified, which is the international standard for software assurance certification. We are the highest certified SIEM vendor globally, giving you maximum assurance of positive security engineering at the design and engineering stages.

Control costs with predictable pricing

On average, an organization's data volume increases by 40% a year. We designed LogPoint to eliminate the stress of growing costs. A transparent pricing model based on the number of devices sending logs rather than data volume means you can easily scale and plan for the future.

LogPoint solutions

SIEM

Our SIEM solution collects log data from devices and applications across your IT infrastructure, helping you optimize your IT operations. It automatically identifies and sends alerts about any critical incidents or abnormalities. Intuitive dashboards and auto-generated reports make it easy to perform log management and compliance auditing.

UEBA

User entity and behavior analytics (UEBA) uses machine learning to strengthen your security posture. UEBA monitors users and entities to detect anomalies in behavior patterns that could indicate a threat. Our solution assigns risk scores for every user and incident to help analysts focus on the most critical incidents.

Director

Director helps SIEM administrators orchestrate and automate cybersecurity tasks that would otherwise tie up the security operations team. Using Director, MSSPs and enterprises can easily update, manage, operate and monitor large multi-tenancy SIEM deployments.

Applied Analytics

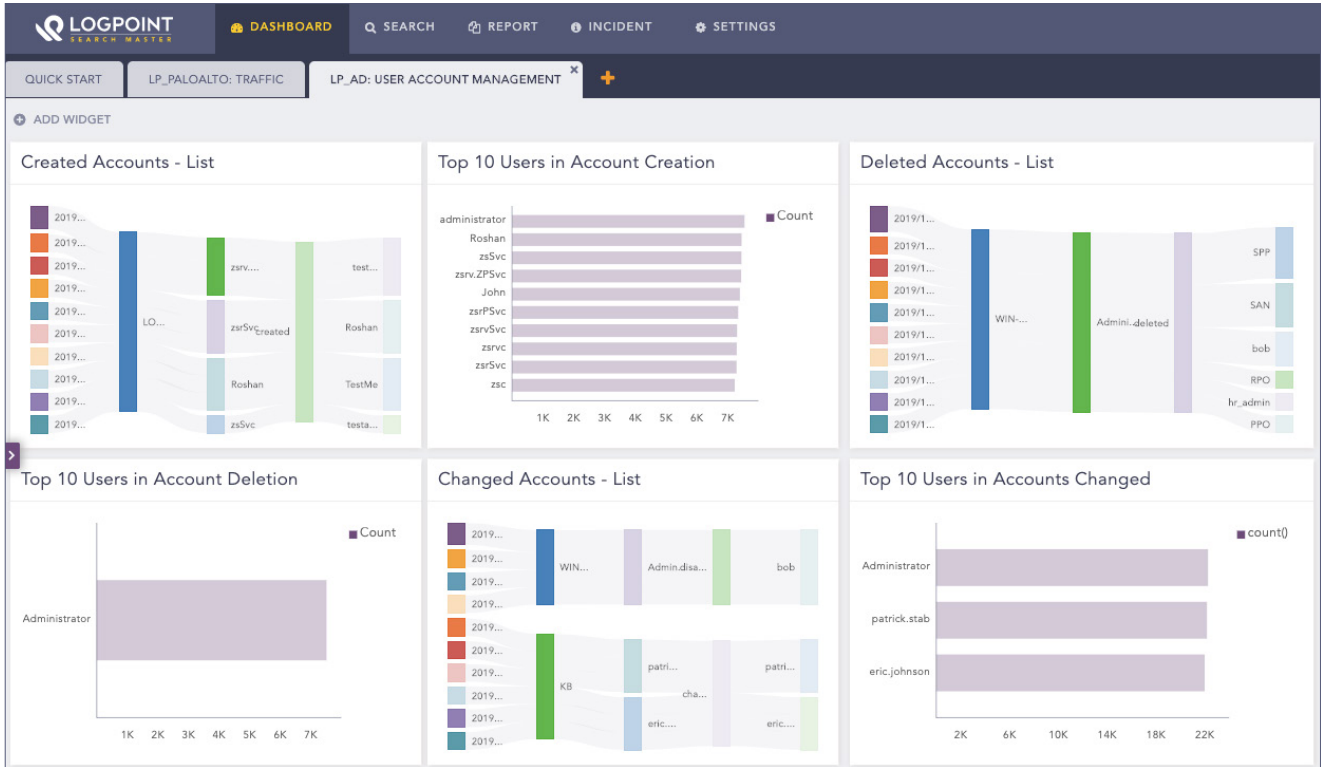

Designed for the non-IT user, Applied Analytics provides a simple way to search, schedule and run reports based on application logs. Strict permission control makes Applied Analytics the perfect solution for reports that include sensitive information, such as bank account details.

LogPoint for SAP

LogPoint for SAP integrates SAP systems with SIEM for compliance management and security monitoring of SAP data, eliminating the SAP security blind spot. Empower your analysts with full insight into your SAP system to ensure that your most valuable assets are safe.

Integrations

Extend the capabilities of LogPoint by integrating with third-party security applications, such as SOAR platforms, to automate threat response and threat intelligence feeds, to collect and analyze the latest threat data. Create an all-in-one cybersecurity solution to increase security operations efficiency.

The Dashboard gives instant visual updates.

Trusted by cybersecurity professionals

We developed LogPoint in close cooperation with managed security service providers (MSSPs) to deliver a world-class solution that meets market demands. Our free, market-leading global support consistently receives a 98%+ customer satisfaction rating.

About LogPoint

LogPoint enables organizations to convert data into actionable intelligence, improving their cybersecurity posture and creating immediate business value. Our advanced next-gen SIEM, UEBA and Automation and Incident Response solutions, simple licensing model, and market-leading support organization empower our customers to build, manage and effectively transform their businesses.

We provide cybersecurity automation and analytics that create contextual awareness to support security, compliance, operations, and business decisions. Our offices are located throughout Europe and in North America. Our passionate employees throughout the world are achieving outstanding results through consistent customer value-creation and process excellence. With more than 50 certified partners, we are committed to ensuring our deployments exceed expectations.
